

# Project-W Progress Report

2017-01-02

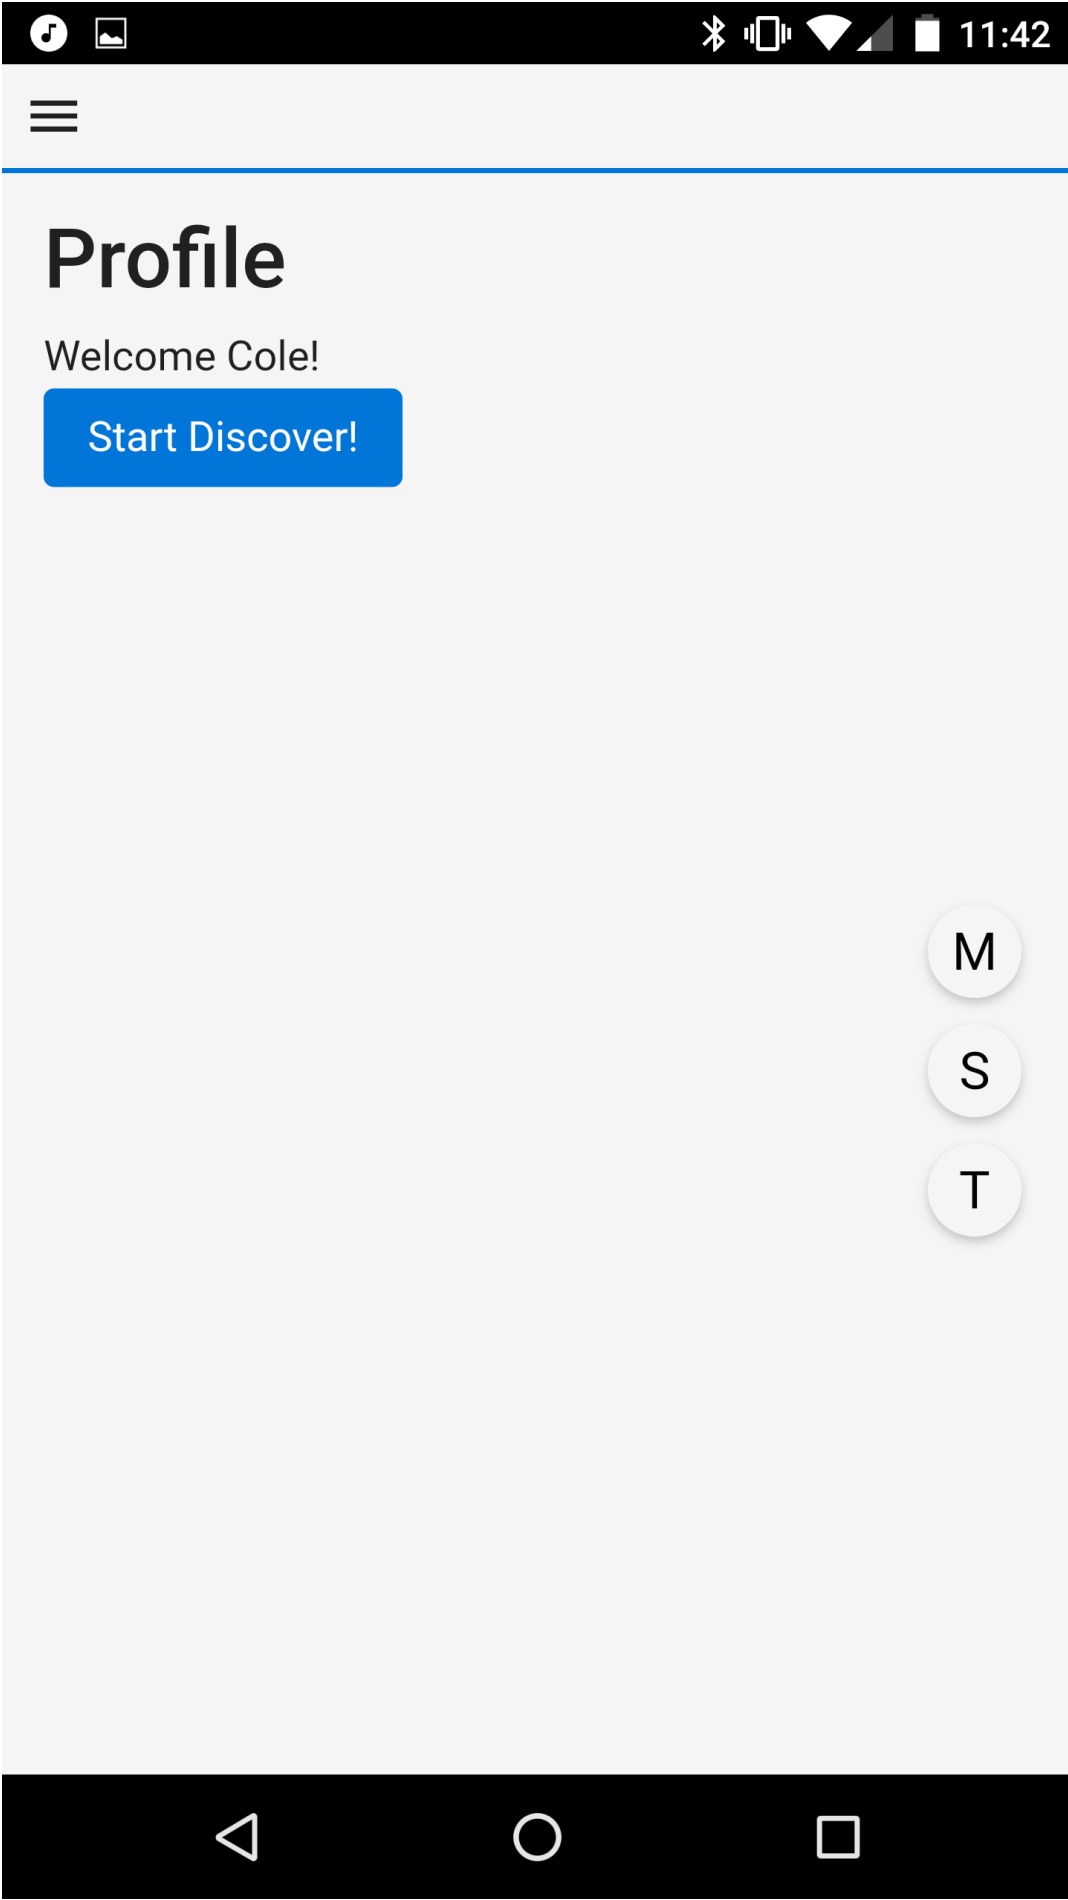

## Basic Navigation

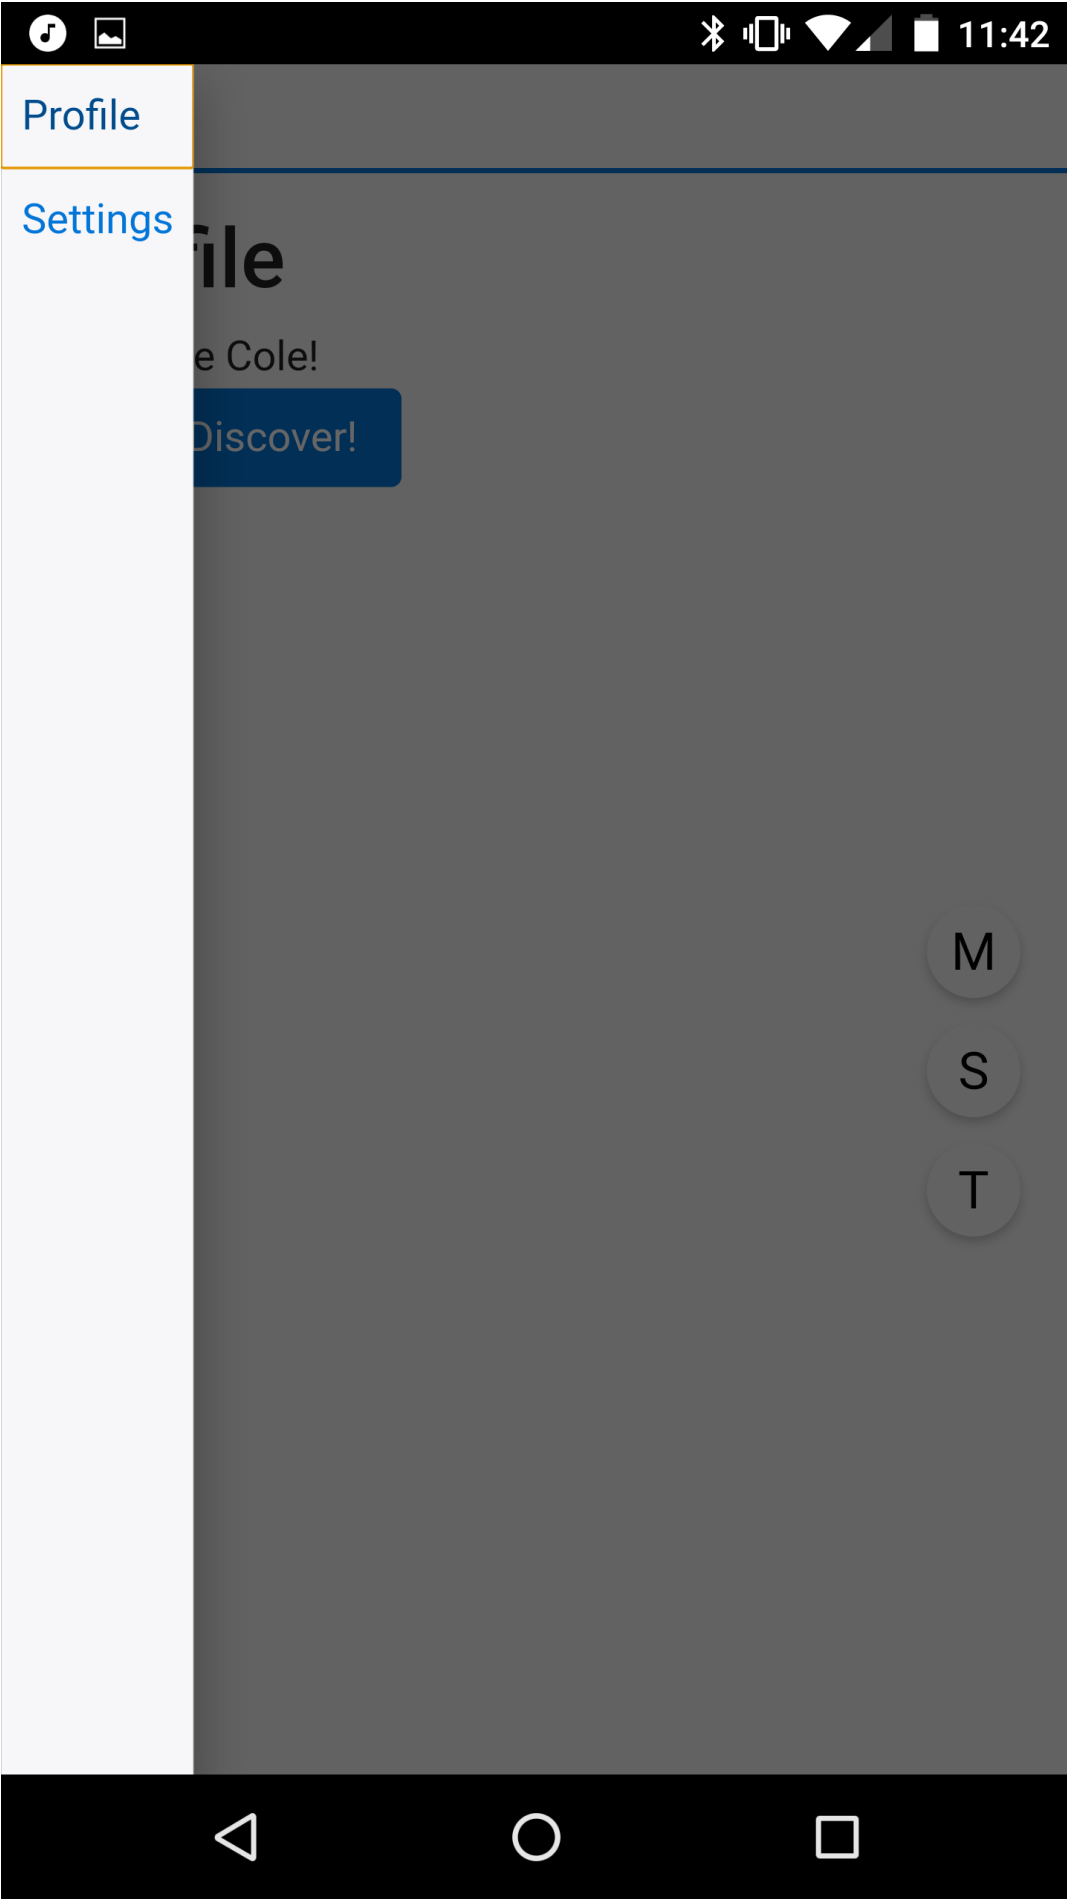

**1.0 Splash Screen**  
Currently a stand in Project-W Logo.

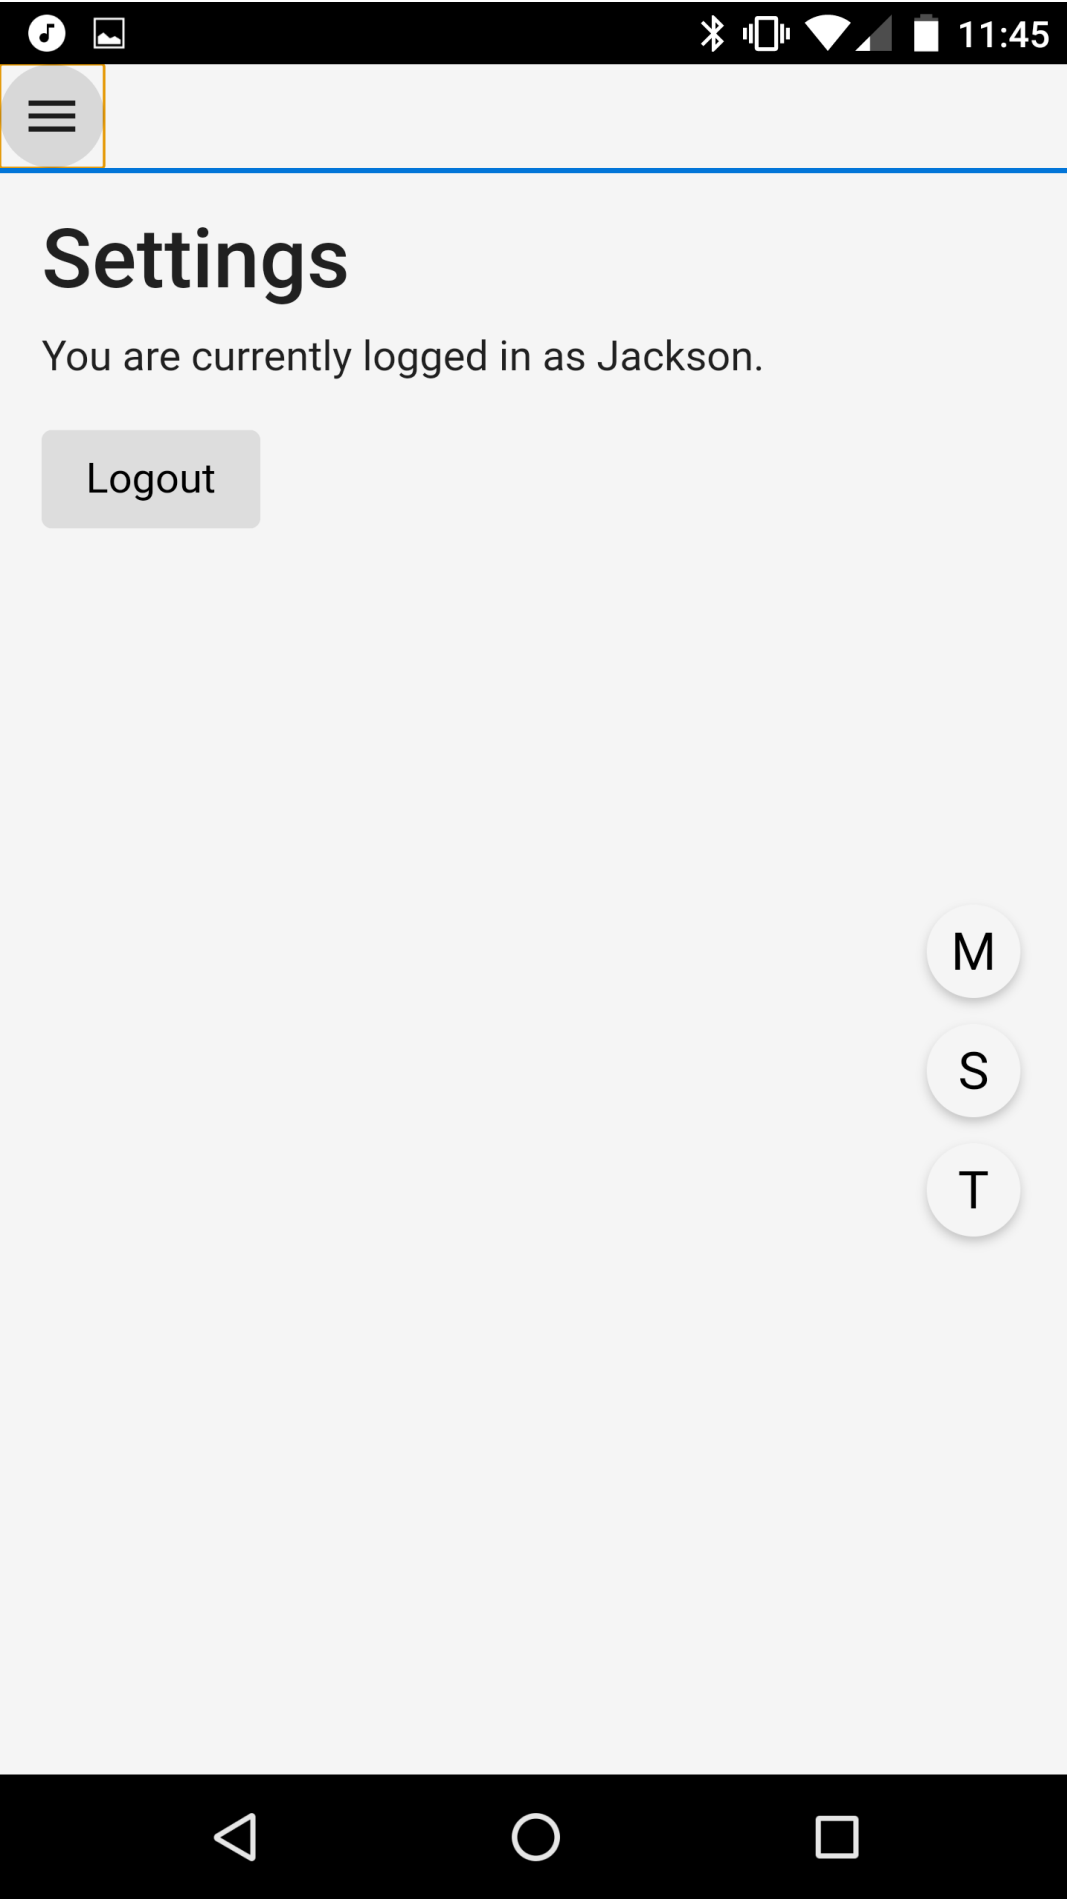

**1.01 Login Screen**  
Highly functional, highly understandable /s

**1.02 Profile**  
Home page to view notifications, and pending requests.

**1.03 Drawer**  
Appwide drawer for common navigation.

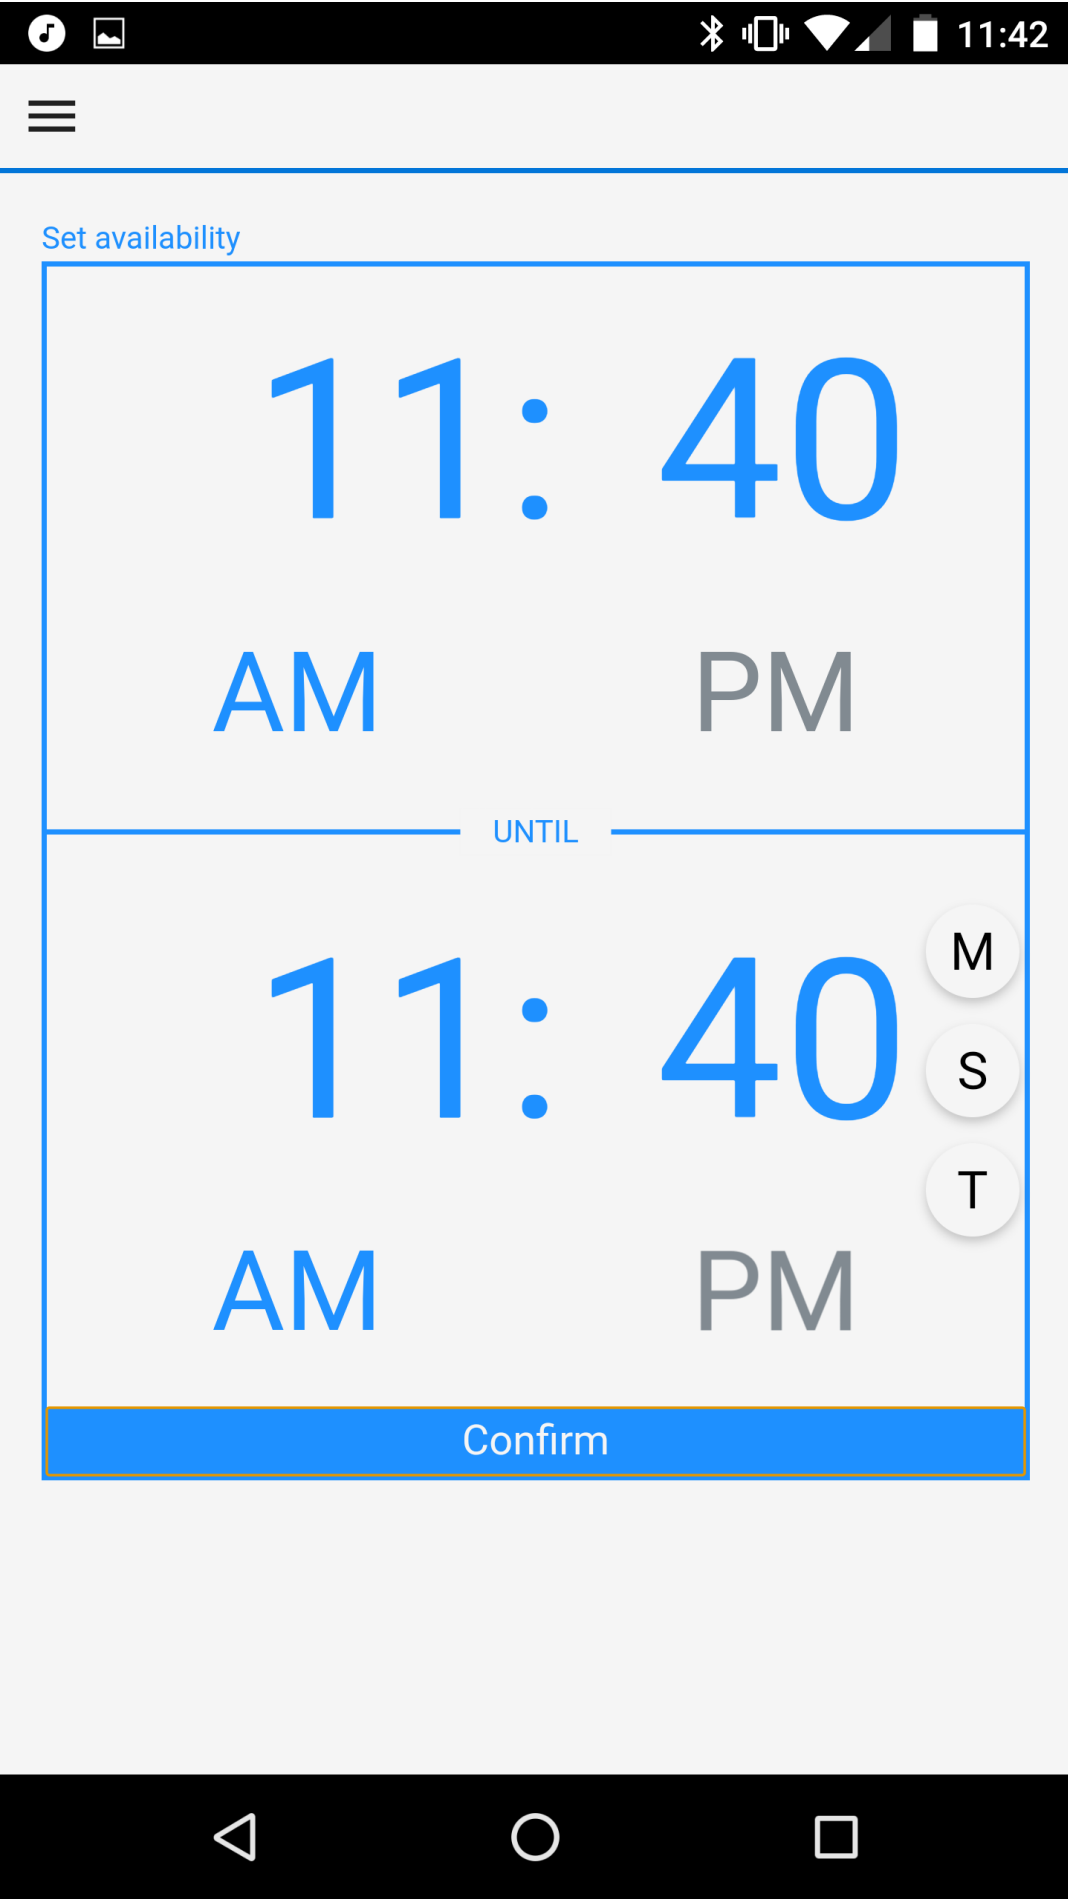

**1.15 Settings Page**  
Settings, account, logout, email, etc. Uses the same route as /login

## Discover

So far, our discover page does not go past the availability set up, yet. We began development of the lobby messages UI first, as it is straight forward, and we have many examples of good UI design to follow as we created it.

In addition, starting with the Lobby Messages portion of the app helped lay ground work for many parts of the app that include Dialogs, Inputs, Time display, Renderers (which take raw server responses and compile them into displayable items), and a DataService (which caches Profile information for retrieval by smaller components).

**1.04 Discover Setup**  
Time from and until setup for Discover stage.
